What is ADS LogManager

The ADS LogManager product family is a full-featured logging/auditing solution for Advantage Database Server 7 and higher. ADS LogManager logs data changes in the database for different data manipulation operations (Delete/Insert/Update) on user-definable database objects (tables, columns). A point-and-click interface enables you to define easily, which database objects should be logged. If you are interested in logging a history of price changes in a table ARTICLE, just define it with one mouse-click and relax.

Application Areas

- Log any kind of data changes
- To answer questions like: “Who has when modified, deleted or inserted a certain record?”
- Logs for statistical purposes (e.g. price fluctuations, ...)
- Tweak your client application concerning DML operations
- “Black Box Debugging”
- Audit trails as a necessity to conform to different application domain quality standards (e.g. US Food & Drug Administration, ...)
- Data logs as base module for replication

Features

- Supports Advantage Database Server 7 and higher
- Supports table operation logging
- Supports table column logging
- Supported datatypes for column logging are all datatypes that are castable to the CHAR datatype, and datatypes with variable length (MEMO, IMAGE, BLOB)
- Supports user-definable conditional logging
- Logging mechanism is integrated in the database. No extra coding in your client application necessary
- A powerful Prepare-Wizard supports you in creating all necessary logging metadata objects
- Load/Save logging metadata names within the Prepare-Wizard from/to a file
- Unprepare-Wizard cleans up your database from all logging data and logging metadata
- Supports a user-friendly way to define which database objects should be logged
- Definition of operation/column logging for a specific table or the complete database with one step
- Logging definition can be reused on similar databases by using the built-in logging definition Import/Export functionality
- Logging metadata of a prepared database can be exported and used on an unprepared database to prepare it without using the Prepare-Wizard
- Scripting engine to automate repetitive tasks in a script based way. **Coming soon!**
- Shows statistics how many operations and columns are registered for logging
- Supports browsing in logged data
- Load/Save browsing criterias from/to a file
- Logged data can be exported into one of the following formats (MS Excel, MS Word, RTF, HTML, Text, XML, CSV, DIFF, SYLK, LaTeX, SQL, Windows Clipboard)
- Logdata reporting ability. **Coming soon!**
- An integrated BLOB/MEMO viewer enables you to view logged BLOB/MEMO data supporting the following formats with an optional ZLib compression (BMP, WMF, ICO, JPG, OLE-Data, TXT, CSV, RTF).
- Online-Help
- A Read-Only version of ADS LogManager (ADSLMViewer), only for browsing, exporting and printing logged data is available as separate product.
- AddOn: ADSLMExport v1.0 - The ADSLM Log Data Export Utility.
- Registered users have unlimited E-Mail support and longlife product updates free of charge

ADSLM Addon's

- **ADSLMViewer:** Same code base as ADS LogManager, but without the capability to change the logging schema.
- **ADSLMExport (Command line utility):** Export logged data into different formats.
